

Trados Enterprise

Translate everything your way

Trados Enterprise is an AI-powered, intelligent translation management system (TMS) designed for global organizations that want a customized solution.

Built to enterprise scale, it's your hub for optimizing every step of the localization process to suit your unique setup. Through automation and customization, it cuts through complexity and the sometimes chaotic nature of localization. No matter how advanced your localization needs are, with Trados Enterprise you can translate everything – your way.

Flexible, secure platform

Translate any volume of content and do it as often as you need. Whether your projects contain large files or thousands of small ones, they're a snap to translate and manage with Trados Enterprise. You can use any translation service, in-house or external, including RWS Language Services.

You can also rest easy that your information is protected. Trados Enterprise gives you total control of your data within a **secure hosted environment**, while sophisticated workflows give you complete traceability across the localization journey, from project submission and translation through the review cycle to publishing.

Which solution is right for you?

Trados Enterprise gives you all the **features** of **Trados Accelerate** – plus a range of customizations and AI capabilities. Both of these TMS solutions, together with our translation collaboration solution, **Trados Team**, and our market-leading CAT tool, **Trados Studio**, are built on a single platform that natively integrates desktop and cloud capabilities.

Key features of Trados Enterprise

Trados Enterprise gives you a range of features in addition to all the features of Trados Accelerate:

Custom workflows

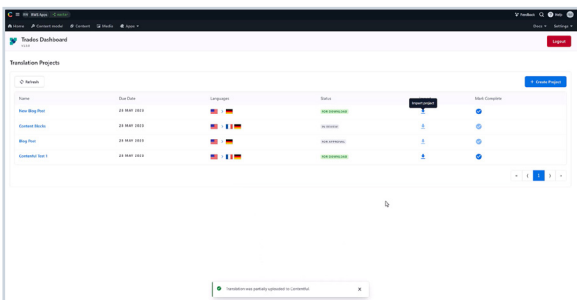

Create your own workflow templates in our powerful workflow editor, completely customizing every step to your requirements. The visual interface lets you define your own routes for the flow of work – onwards, backwards, branching or in loops – for ultimate flexibility. You can streamline your processes and automate manual handoffs between all stakeholders, including requesters, project managers, linguists and reviewers. With end-to-end clarity and visibility, Trados Enterprise minimizes the chances of miscommunication and helps you optimize all your localization processes.

Amend any workflow in the workflow editor

Wide range of connectors

With seamless integration to more than a hundred content repositories, Trados Enterprise accelerates translation. Choose from an extensive range of different types of **connectors** to create the solution that's just right for you – or use your enterprise-level API access to build any custom integration for your business. By integrating Trados Enterprise with the systems used by your content creators, you empower them to request translations and track project status from their own environment – significantly simplifying the translation experience for them.

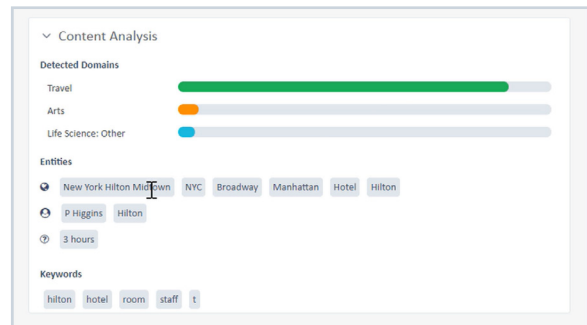

The Contentful connector in action

AI capabilities

You can leverage the power of **Linguistic AI** in multiple ways to accelerate your time to market.

Generative Translation combines the power of an LLM with your linguistic resources to deliver high-quality translations from the start and reduce post-editing efforts. For media files, **Generative Subtitles** uses an LLM to automatically transcribe and translate video content directly in the Trados platform, leveraging existing workflows and linguistic resources to produce translation output that consistently reflects your unique tone and style. **Smart Review** provides automatic AI-driven reviews and rationales for its scores, allowing reviewers to identify which segments need continued investment and shortening project timelines. **Content Analyzer** uses AI to extract key information from files, enabling project managers to confirm that it's the content they expect and to select the best workflow.

We're adding new AI capabilities at a regular pace, with a focus on smart automation to improve quality and reduce costs even further, while keeping your data secure.

The content analyzer identifies the content domain

Custom reports

Unlock the full potential of localization with advanced custom reporting capabilities and intuitive dashboards. Trados Enterprise gives you the flexibility to embed a wide range of system data into custom reports, delivering ultimate insight into linguistic data, performance metrics and projects. Maximize your ability to make informed, data-driven decisions and optimize your localization processes.
